by  Maple Armor

Fire Alarm Systems

Located on a dramatic headland above the crashing waves of the Pacific Ocean, Black Rock Oceanfront Resort is surrounded by the Wild Pacific Trail and the rugged rocky coast of West Vancouver Island's amazing beaches, forests, restaurants, and attractions, including Pacific Rim National Park, Long Beach, Ucluelet Aquarium, and Barkley Sound.

The resort required a new fire alarm system for their newly constructed Employee residences and sought the services and expertise of Phoenix Fire and Maple Armor's

products to provide them with the ideal fire protection solutions.

Their new system included Maple Armor's complete line of products FW106 control panel, FW122 annunciator, FW511 photoelectric smoke detector, FW521 heat detector, FW721 manual stations, FW962 horn strobe, and FW982 strobe. Furthermore, the FW811 Input Module, FW831 Relay Module, and FW851 Isolator Module were also installed.

The installation was completed in three days without any difficulties or issues. We have received such positive

feedback from the customer who loves the look of the panel and how well made it is. We are also so pleased to hear back from our partners who commended us on how easy to install our systems are. We always strive to provide our partners and customers with the best fire protection solutions based on their needs and are ecstatic to hear their testimonies of flawless installations.
